

Weekly Planning (Week 43 - Oct 20 to 24)

This trade plan is for 4H swing trading. Expect to hold your trades for 3 to 4 days, watch out for intra-week reversal during the week at key support and resistance zones of the lower TF like D and H4 charts.

Some major data release next week affecting both GBP and AUD. The UK prelim GDP is prime mover and AUD also impact by on CNY data. So be prepared for some volatility.

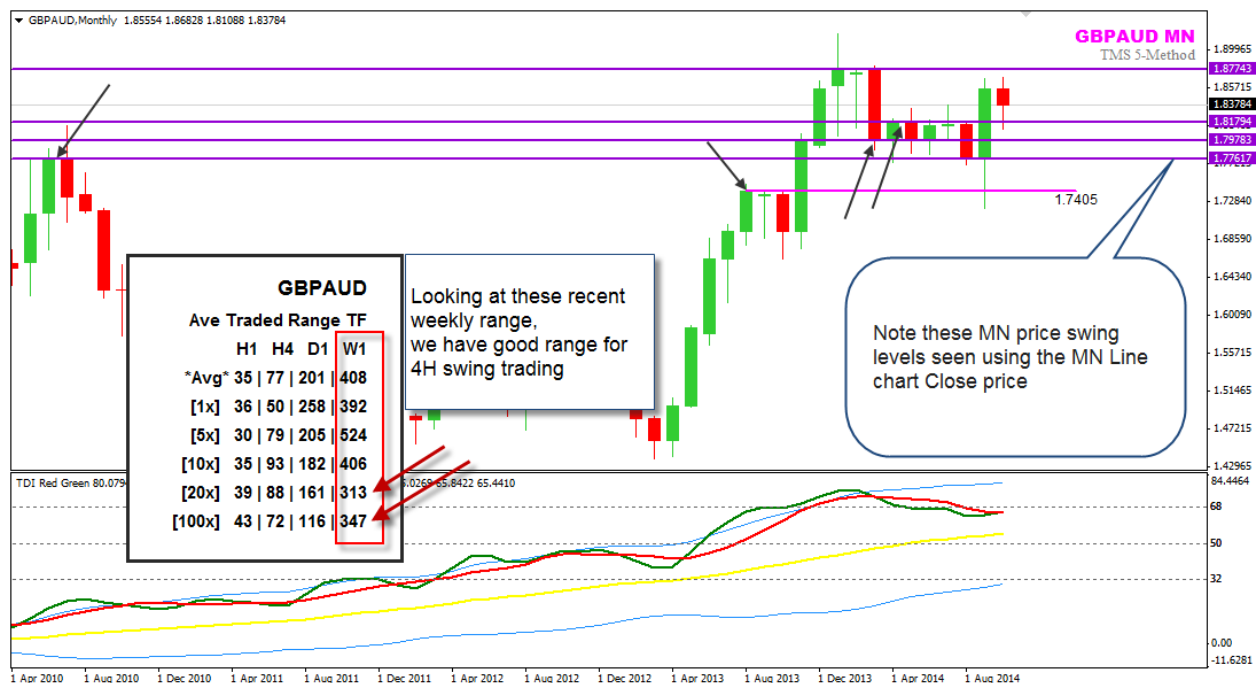

Trade Setups

Use D1 and H4 charts to look for TMS setups.

Also when we have intraday open trades on H1, we must check the H4 and D for potential setups and then convert our trades to 4H swing trades when there is opportunity. Consider to resize your positions by adding on new positions and work on the average entry price. Also consider to close older profitable positions and bank-in your floating profits, and re-open new ones.

Trade Management using CaveManager. Parameter setting will be discussed at the end of this document.

Monthly chart:

On the MN chart above, we draw the historical price swing levels using the Line Chart.

We only draw these price levels which are within +/- 500 pips of the current market as these should cover the range where we expect price to move based on its AWR Average Weekly Range.

Note the AWR traded range of GBPAUD and we shall use the range of the average 20 weeks and 100 weeks for our target profit planning.

In a wide ranging sideways market type, we usually see the market making 60% of its AWR.

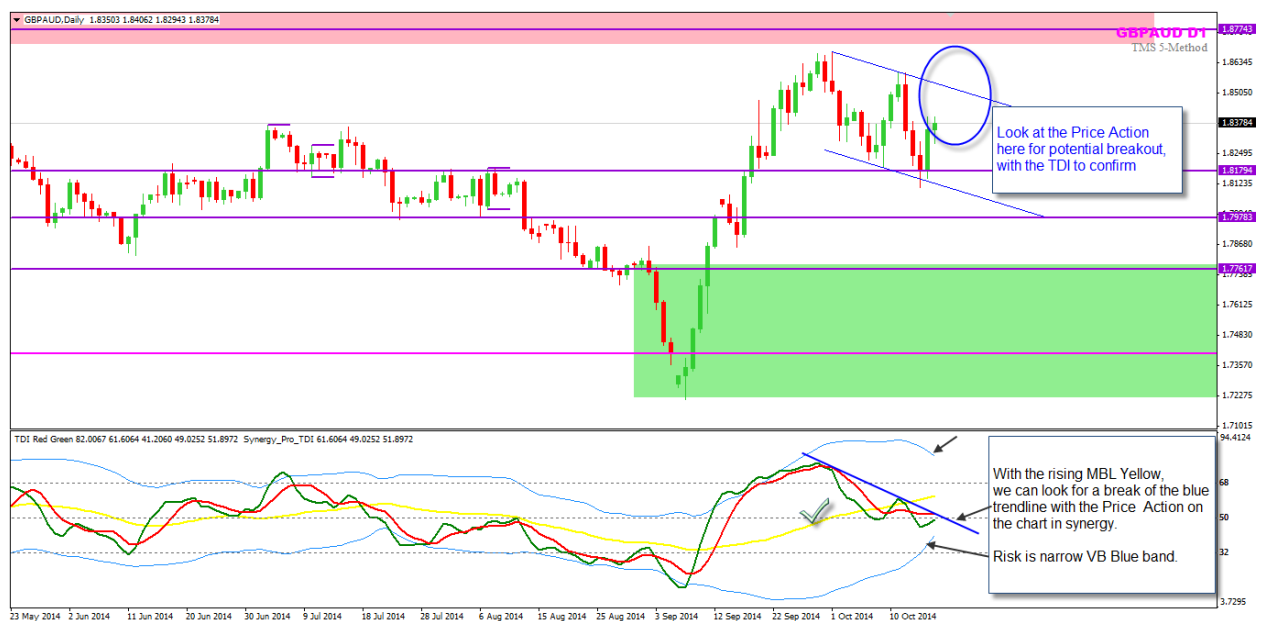

When there is strong trend, then 100% of the AWR is good for target TP.

Weekly chart:

Weekly chart shows price is sideways for 3 weeks is in a possible support zone with that MN Historical S&R 1.8179.

D1 Chart:

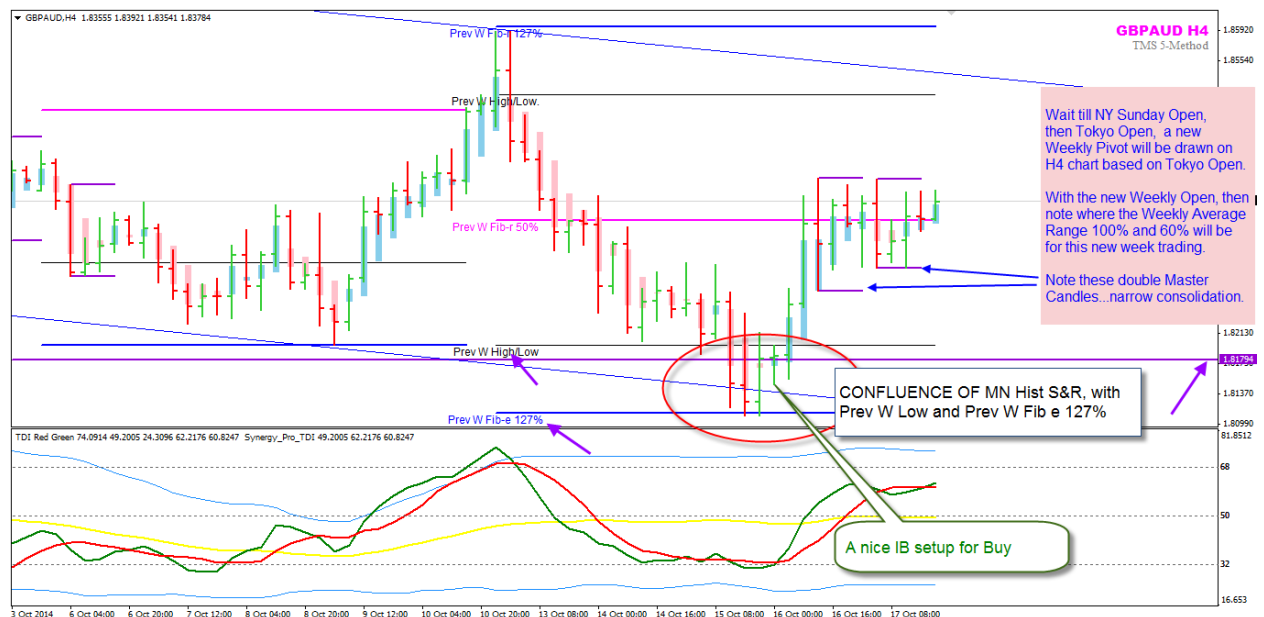

D1 chart show a sideways market type with price within a falling channel. Range is good for TMS 4H swing trading and a potential continuation breakout.

The TDI MBL is rising which indicates the higher timeframe momentum. W1 TDI is a retracement, which is shallow.

Potential to use the TDI trendline breakout with price action above.

H4 chart:

Still early on H4 to see any trade setups. Prefer to wait till Tokyo open on 20 Oct, to see where the Week Open and the Weekly Pivot levels.

To look out for PA around the Previous Week Fib 50% to see if we have a lower TF entry for buy or sell.

Look for lower TF support and resistance using the previous Week OHLC with the Weekly Pivots.

Anticipate any big move before the date/news release. So be vigilant and prepared.

News calendar:

Oct 19, 2014 - Oct 26, 2014					Up Next	Today	This Week	
Date	5:35am	Currency	Impact	Detail	Actual	Forecast	Previous	Graph
Sun Oct 19	7:30pm	AUD	RBA Assist Gov Kent Speaks					
Mon Oct 20	8:30pm	AUD	Monetary Policy Meeting Minutes					
Tue Oct 21	4:30am	GBP	Public Sector Net Borrowing			9.3B	10.9B

Fri Oct 24	4:30am	GBP	Prelim GDP q/q			0.7%	0.9%	
Sat Oct 25								
Sun Oct 26								

CaveManager Parameters:

Important Note:

- 1) At the moment, we do not use CaveManager to manage multiple open positions as a Basket. This has not been tested yet.
- 2) If you have multiple positions to manage as a Basket. use the MPTM trade manager.

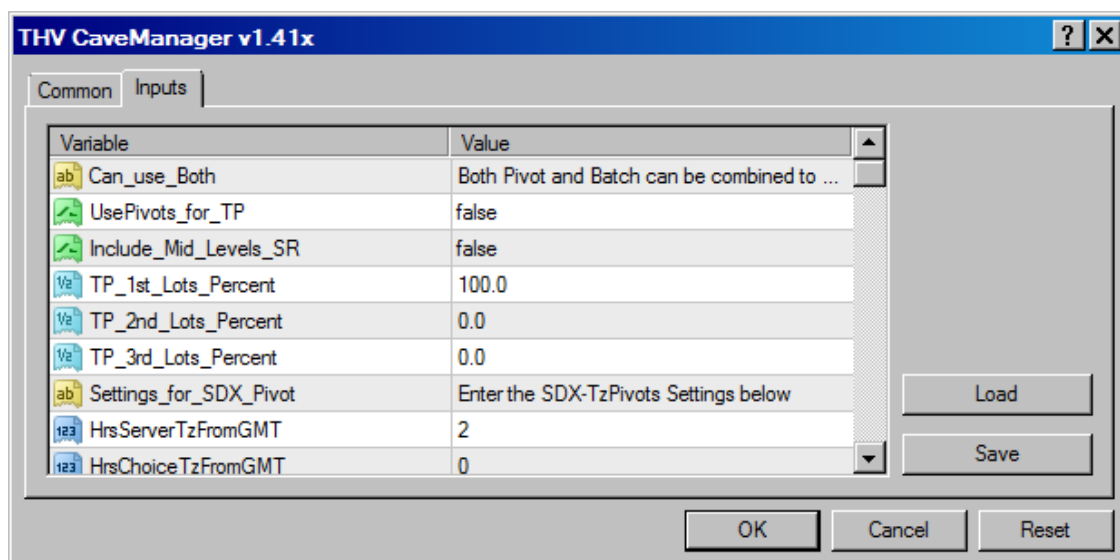

Recommendation to use multi-lots entry and with Multiple Exits.

For example, if you trade 0.5 lot, you can consider this as 5 lots of 0.1 each. The let CM manage these in exit by batch.

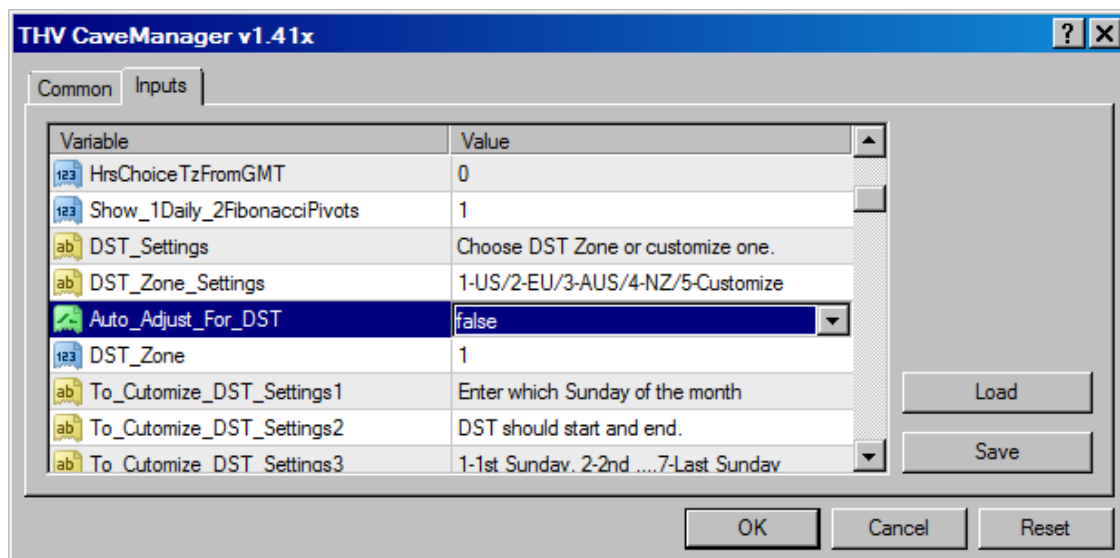

You can choose 2 to 3 exits in batches. I prefer to use 3 exits in batches.

Usually the last batch is to “let profit run” in case we have a breakout.

Pips Settings for Exit in Batch.

I disable the use of Pivots.

Also do not use the DST setting.

THV CaveManager v1.41x

Common Inputs

Variable	Value
cus_dst_time_end	02:00
UseTP_By_Batch	true
TP_1st_Batch_Lots_Percent	40.0
